Empathy Map

Project: E-commerce Seller Analytics | Primary persona: Linda, small online seller

Scenario: Linda is reviewing monthly sales and deciding which products need attention. The statements below are hypotheses to validate in user interviews.

SAYS

- I need to know which products are selling well and which are not.
- I have to check several places to understand my sales.
- I don't know what to focus on first.

THINKS

- Are sales improving or getting worse?
- Which products should I restock, promote, or take out?
- Can I trust that I am reading these charts correctly?

DOES

- Checks marketplace reports and spreadsheets.
- Compares recent orders with previous weeks or months.
- Looks up individual products when sales change.

FEELS

- Overwhelmed by too many metrics and graphs.
- Frustrated by switching between tools.
- Relieved when a trend is explained clearly.

Pain Points

Fragmented information; hard-to-compare product metrics; busy dashboards; limited guidance about next steps.

Needs / Opportunities

One clear sales overview, easy product comparisons, understandable charts, and evidence-based insights with suggested investigations.

User Journey Map

Persona: Linda | Goal: Understand a decline in monthly sales and decide what to investigate.

This journey describes an assumed current experience, before the proposed dashboard. Validate the steps and emotions during interviews.

Stage	Actions / touchpoints	Thoughts & feelings	Pain point / opportunity

1. Notice change	Sees fewer orders or lower revenue in store admin.	“Are my sales dropping?” Concerned.	No quick explanation or clear comparison.
2. Gather data	Opens marketplace analytics, spreadsheets, and order reports.	“Where is the full picture?” Frustrated.	Scattered information; unify essential metrics.
3. Compare products	Checks product lists and prior-period sales individually.	“Which products changed most?” Overwhelmed.	Difficult comparisons; rank changes with filters.
4. Interpret trends	Attempts to connect sales patterns to specific products or dates.	“What does this chart tell me?” Unsure.	Complex visuals; add clear labels and plain-language summaries.
5. Decide next step	Chooses a product to review, restock, or promote.	“What should I look into first?” Cautious.	Little guidance; show possible next steps without claiming causation.

Key Features for the Proposed Design

- Centralized overview
- Period-over-period product comparisons
- Simple visual hierarchy
- Plain-language insights
- Clear next-step prompts

Research note

After interviews, replace assumptions with actual quotes and observed behaviors. Keep seller and marketplace-manager journeys separate if researching both roles.
